

Improving insight into your organisation's **flight efficiency** and **network predictability** through filed flight level adherence monitoring.

Adherence to filed flight levels maximises the use of available **airspace capacity**, which is especially critical in congested areas. Efficient use of airspace helps **minimise ATFM delays** and improve overall **network efficiency**.

"Adhering to the filed flight level is important for maintaining predictability and the overall efficiency within the NM area. It benefits airlines, passengers, air traffic controllers and the environment" - Guy Hawson Operational Performance Expert (Eurocontrol)

Flight level adherence data can provide valuable insight for **continuous improvement** and optimisation of your organisations **flight planning processes**.
 (e.g. better fuel management)

FLIGHT PLANNER BENEFITS

- Assists with identifying routes/flights that could be more efficient.
- Free and easy-to-use.
- Adhering to filed flight levels supports consistent and predictable operations.
